2.10 Risk Disclosure

The Management Company shall ensure that effective risk control measures are in place for the protection of the Unit Holders' interests.

The objective of the risk control process is to endeavor to monitor and manage the various types of risks, including market risks, credit risks, and operational risks, with a view to achieving the investment objective of the allocation plan.

Investors must realize that all investments in mutual Funds and securities are subject to market risks.

Our target return / dividend range cannot be guaranteed and it should be clearly understood that the portfolio of the Allocation Plans is subject to market price fluctuations and other risks inherent in all such investments. The risks emanate from various factors that include, but are not limited to:

- (1) **Equity Risk** - Companies issue equities, or stocks, to help finance their operations and future growth. The Company's performance outlook, market activity and the larger economic picture influence the price of a stock. Usually when the economy is expanding, the outlook for many companies is good and the stock prices may rise and vice versa.
- (2) **Government Regulation Risk** - Government policies or regulations are more prevalent in some securities and financial instruments than in others. Funds that invest in such securities may be affected due to change in these regulations or policies, which directly or indirectly affect the structure of the security and/or in extreme cases a governmental or court order could restrain payment of capital, principal or income.

- (3) **Country or Political Risk** – The uncertainty of returns caused by the possibility of a major change in the political or economic environment of the country such as break down of law and order, war, natural disasters, etc. and any governmental actions or legislative changes.
- (4) **Interest Rate Risk** – A rise or decline in interest rates during the investment term may result in a change in return provided to investors
- (5) **Credit Risk** - Credit Risk comprises Default Risk and Credit Spread Risk and Downgrade Risk. Each can have negative impact on the value of the underlying CIS.
 - **Default Risk** - The risk that the issuer of the security will not be able to pay the obligation, either on time or at all;
 - **Credit Spread Risk** - The risk that there may be an increase in the difference between the return/markup rate of any issuer's security and the return/markup rate of a risk free security. The difference between this return/mark up rates is called a "credit spread". Credit spreads are based on macroeconomic events in the domestic or global financial markets. An increase in credit spread will decrease the value of income and including money market instruments;
- (6) **Price Risk** - The price risk is defined as when the value of the Fund, due to its holdings in such securities rises and falls as a result of change in interest rates.
- (7) **Liquidity Risk** – Liquidity risk is the possibility of deterioration in the price of a security in the Fund when it is offered for sale in the secondary market.
- (8) **Settlement Risk** – At times, the Fund may encounter settlement risk in purchasing / investing and maturing / selling its investments which may affect the Fund's performance etc.
- (9) **Reinvestment Rate Risk** –In a declining interest/ markup rate economic environment, there is a risk that maturing securities or coupon payments will be reinvested at lower rates, which shall reduce the return of the Fund compared to return earned in the preceding quarters.
- (10) **Events Risk** - There may be adjustments to the performance of the Fund due to events including but not limited to, natural calamities, market disruptions, mergers, nationalization, insolvency and changes in tax law.
- (11) **Redemption Risk** – There may be special circumstances in which the redemption of Units may be suspended or the redemption payment may not occur within six working days of receiving a request for redemption from the investor.
- (12) **Performance risks of Equity and Income Schemes** – The performance of AGPPF would depend upon the performance of the Equity Schemes and Income Schemes in which investments on account of Allocation Plans would be made.
- (13) **Distribution Risk** – Dividend distribution may also be liable to tax because the distributions are made out of the profits earned by fund and not out of the profits earned by each unit holder. Unit holders who invest in a fund before distribution of dividends may be liable to pay tax even though they may not have earned any gain on their investment as return of capital to investors upon distribution is also taxable.
- (14) **Shariah non-compliance Risk:** The risk associated with employing funds in investments that are not consistent with the Principles of Shari'ah.

(15) ⁴CPPI Plan Specific Risks

Mismatch Risk – This risk pertains to the event where in case of a Bond Event there is no risk free CIS available for the Plan to invest in that offers the same yield as required for Capital Preservation at maturity.²⁷

(16) Gap Risk –

- I. This risk pertains to the Gap event where the Portfolio Value falls below the Present Value (bond floor) of the capital preservation amount required at maturity.
- II. The Plan, in its endeavor to seek Principal Preservation, may allocate the entire portfolio to underlying investments in the Principal Preservation Segment under the Authorized investments in clause 2.2.2 and Units of the Plan may remain invested in such underlying investments for the entire tenure of the Plan without any participation in the Islamic equity component of the Investment Segment
- III. At times of high volatility in the equity markets or any other circumstances, it may not be possible to carry out the portfolio rebalancing. In such a case, the reallocation may take place on the next business day or on a business day as deemed appropriate by the Management Company. Such circumstances may affect the Plan’s ability to seek Principal Preservation.
- IV. As the allocation of portfolio changes from Islamic equity to Islamic income market component consequent to steep fall in equity markets, there may be no participation in subsequent upward movement in the Islamic equity component while the Plan remains invested entirely in the Islamic income component.

(17) Risk Control in the Investment Process

- a) In line with the Investment Objective of Plans, the Investment Committee shall seek to maximize returns and preserve the Initial Plan Size (adjusted for redemptions, if any, during the Life of the Plan) through careful assessment of prevailing market risk (s), credit risk, and macro-economic risk.
- b) Furthermore the exposure to the Islamic Equity Scheme under the Authorized Investments shall be determined by a Multiplier.
- c) The selected Multiplier shall be selected based on the Investment Committee view on the macro economic scenario, equity market performance, and prevailing market risks thereof.
